
Assignment No. 7

Q. Consider telephone book database of N clients. Make use of a hash table implementation to quickly look up client's telephone number.

```
#include <iostream>
#include <string>
using namespace std;

const int TABLE_SIZE = 10;

struct Client {
    string name;
    string phone;
    bool isOccupied;

    Client() {
        name = "";
        phone = "";
        isOccupied = false;
    }
};

class TelephoneBook {
    Client table[TABLE_SIZE];

    int hashFunction(string name) {
        int sum = 0;
        for (int i = 0; i < name.length(); i++)
            sum += name[i];
        return sum % TABLE_SIZE;
```

```
}
```

```
int searchIndex(string name) {  
    int index = hashFunction(name);  
    for (int i = 0; i < TABLE_SIZE; i++) {  
        int probeIndex = (index + i) % TABLE_SIZE;  
        if (table[probeIndex].isOccupied && table[probeIndex].name == name) {  
            return probeIndex;  
        }  
    }  
    return -1;  
}
```

public:

```
void addClient(string name, string phone) {  
    int index = hashFunction(name);  
    for (int i = 0; i < TABLE_SIZE; i++) {  
        int probeIndex = (index + i) % TABLE_SIZE;  
        if (!table[probeIndex].isOccupied) {  
            table[probeIndex].name = name;  
            table[probeIndex].phone = phone;  
            table[probeIndex].isOccupied = true;  
            cout << "Added: " << name << " -> " << phone << endl;  
            return;  
        }  
    }  
    cout << "Telephone book is full. Cannot add " << name << "." << endl;  
}
```

```
void getNumber(string name) {  
    int idx = searchIndex(name);  
    if (idx != -1)
```

```

        cout << name << "'s number is " << table[idx].phone << endl;
    else
        cout << name << " not found in telephone book." << endl;
}

void removeClient(string name) {
    int idx = searchIndex(name);
    if (idx != -1) {
        table[idx].isOccupied = false;
        table[idx].name = "";
        table[idx].phone = "";
        cout << "Removed: " << name << endl;
    } else {
        cout << name << " not found in telephone book." << endl;
    }
}

void displayAll() {
    cout << "\n--- Telephone Book Entries ---\n";
    for (int i = 0; i < TABLE_SIZE; i++) {
        if (table[i].isOccupied)
            cout << "[" << i << "] " << table[i].name << " -> " << table[i].phone << endl;
    }
}

};

int main() {
    TelephoneBook book;

    book.addClient("Aarav", "9876543210");
    book.addClient("Ram", "9123456789");
    book.addClient("Rohan", "9988776655");
}

```

```

book.addClient("Rupesh", "9001122334");
book.addClient("Sahil", "9011223344");

book.getNumber("Rohan");
book.getNumber("Raj");

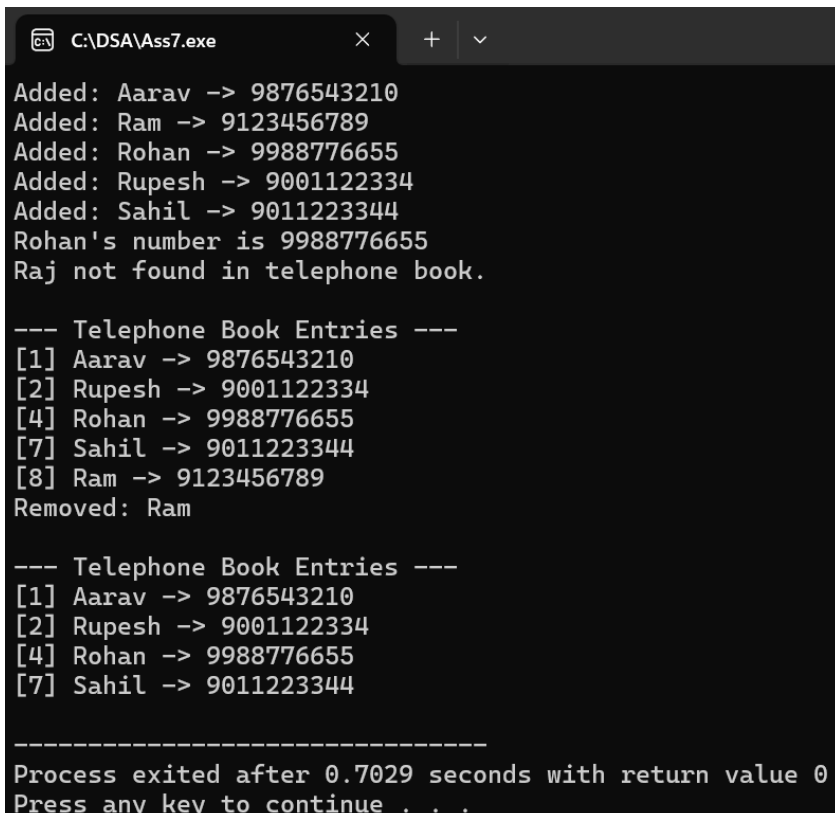

book.displayAll();

book.removeClient("Ram");
book.displayAll();

return 0;
}

```

Output :

```

C:\DSA\Ass7.exe
Added: Aarav -> 9876543210
Added: Ram -> 9123456789
Added: Rohan -> 9988776655
Added: Rupesh -> 9001122334
Added: Sahil -> 9011223344
Rohan's number is 9988776655
Raj not found in telephone book.

--- Telephone Book Entries ---
[1] Aarav -> 9876543210
[2] Rupesh -> 9001122334
[4] Rohan -> 9988776655
[7] Sahil -> 9011223344
[8] Ram -> 9123456789
Removed: Ram

--- Telephone Book Entries ---
[1] Aarav -> 9876543210
[2] Rupesh -> 9001122334
[4] Rohan -> 9988776655
[7] Sahil -> 9011223344
